Teacher's Guide

This guide includes:

- Standards
- Related Links
- Discussion Questions
- Activities for Students
- Reproducible Materials

Standards

This guide correlates with the following National Health Education Standards:

Students will:

- Comprehend concepts related to health promotion and disease prevention to enhance health.
- Analyze the influence of family, peers, culture, media, technology, and other factors on health behaviors.
- Demonstrate the ability to access valid information and products and services to enhance health.
- Demonstrate the ability to use interpersonal communication skills to enhance health and avoid or reduce health risks.
- Demonstrate the ability to use decision-making skills to enhance health.
- Demonstrate the ability to use goal-setting skills to enhance health.
- Demonstrate the ability to practice health-enhancing behaviors and avoid or reduce health risks.
- Demonstrate the ability to advocate for personal, family, and community health.

National Health Education Standards:

Many kids see parents or other adults drinking alcohol. Because alcohol is legal and socially acceptable among adults, kids can be confused about its harmful effects and consequences of abuse. These activities will help your students understand how alcohol can affect the mind and body, and how to make safe and healthy choices.

Discussion Questions

Note: The following questions are written in language appropriate for sharing with your students.

1. What's alcohol? What kinds of alcohol do you know about?
2. Have you ever seen an adult drink alcohol?
3. Why do people drink alcohol? When do adults drink alcohol? Do adults have to drink alcohol?
4. How can alcohol hurt people's bodies and minds? What happens when someone drinks too much alcohol?
5. What would you do if someone let you taste alcohol? Who can you go to for help in this situation? Who can help you make good choices in your life?

Activities for Students

Note: The following activities are written in language appropriate for sharing with your students.

Helping Hands

Objectives:

Students will:

- Identify up to five adults whom students can turn to for help with making healthy choices and solving problems
- Trace their handprints and write the names of the adults they can count on in the fingers
- Make a chain of the hands and display them around the classroom

Materials:

- Construction paper
- Art supplies (colored pencils, markers, crayons)
- Yarn or string
- Scissors, hole punch

Class Time:

45 minutes

Activity:

People drink alcohol for many reasons. Sometimes they drink it at dinner or at get-togethers or parties. Other times people drink to try to forget about their problems or to fit in with their friends. To have a healthy lifestyle that doesn't include alcohol, we need to identify adults who can help us make healthy choices and solve our problems.

Today, we'll make a handprint that has the names of adults we trust as a reminder of who can help us make healthy choices. First, trace your hand on construction paper and write the names of up to five people you can go to for help or who are role models who live healthy lifestyles. Then we'll cut our "Helping Hands" tracing and link the handprints together with string to decorate our classroom and show that we have a lot of helping hands.

Extensions:

1. Students join hands in a circle and name one person they wrote on their "Helping Hands" tracing.
2. Invite a school counselor, therapist, pediatrician, clergy member, police officer, or parent to speak to the class about making good choices for a healthy lifestyle, specifically concerning alcohol.

Where Does Alcohol Go?

Objectives:

Students will:

- Show the parts of the body that alcohol can harm

Materials:

- Art supplies (pens, markers, crayons)
- “Where Does Alcohol Go?” handout
- Overhead of “Where Does Alcohol Go?” handout
- KidsHealth articles

Class Time:

1 hour

Activity:

Today we’ll look at the parts of the body that alcohol can harm. Look at the overhead of the body on the board. We’re going to identify the parts of our bodies that alcohol harms. Alcohol is a drug that’s in some drinks. It can change the way you act, feel, speak, and make decisions. It also can hurt your health. When I point to a part of the body, can you guess what it is? (Point to the brain, stomach, heart, liver, blood vessels.) Now let’s label your handout. As I label it on the overhead, you can label the body part on your handout. When we’re finished labeling, you can draw a face and hair.

Extension:

1. Have students bring home their completed handout to share and talk about with their parents or caregivers.

Reproducible Materials

Name: _____

Date: _____

Helping Hands

Instructions: Trace your hand in the space below. Next, write your name in the center. Then, in each finger, write the name of a trusted adult who can help you make healthy choices and solve problems. You can use a different color for each name. Don't worry if you can't fill in all of the fingers. After sharing time, you can add more names if you'd like. When you're finished, cut out your hand tracing.
